

Safename.io

(<https://safename.io/>)

Client

Thailand

SafeName is a unique alias that enables users to have an online profile identity which connects to one or more of their Crypto Address in a single profile.

Challenge

Web Application

It is an application which supports most popular coins including, but not limited to: Bitcoin, Ethereum and Dash. The SafeName browser plugin will help users identify SafeName identities and unsafe crypto addresses such as phishing websites when browsing the internet.

Role

Full Stack Developer

My role was a full stack developer working on both the frontend VueJS and backend Python to create the entire application.

01

Tech Stack & Tools

- VueJS/Python
- Slack/Github/Invision

02

Role

- Full Stack Developer
- Working on the frontend and Backend
- Pixel Perfect Responsive designs and api integration

03

Project

- Daily standups/client chats for progress, discussions

04

Highlights

- The design are pixel perfect and highly responsive.
- Needed to pay very detailed attention to design and make it work on all screen sizes.

Account is in good standing, with some verified addresses and no known bad transactional history

Coins Support by Safename.io

The screenshot displays the Safename.io dashboard interface. On the left, a sidebar contains navigation links: Dashboard, Logout, My Profile, Downloads, and Help. The main header features the Safename.io logo with a 'BETA' badge, a search bar with the placeholder 'Add Address or Safename Here to Search', and a language selector set to 'English'. A dropdown menu is open under the 'Select a' button, listing various cryptocurrencies: ETH, BTC (highlighted), XRP, BCH, LTC, EOS, BNB, BSV, XMR, TRX, AE, AOA, BAT, and BCH. The dashboard content includes a 'Back: Idon' section, a 'CREDIT RISK SCORE' of 57 (labeled 'Good'), and a 'PROFILE KYC' section with instructions on how to improve the risk score. The KYC section includes options for 'Email verified', 'SMS', and 'Trustless KYC', each with a 'Provide Now' link.
